

**DYNEGY**

**MARKET SUMMARY REPORT**

*September 2023*

## UNDERSTANDING THIS MARKET SNAPSHOT

Use the information in this report to identify trends and movements affecting electricity in the MWNE market to make informed energy decisions. Here are a few quick tips:

- **Power prices** are determined from forward Heat Rate and natural gas strips for a specific timeframe.  $Power Price = Heat Rate \times Natural Gas Price$ . Power prices can change based on electricity supply and demand, which is driven by factors such as weather, the economy, available generation and grid conditions.
- **Natural Gas** prices are a key driver of power prices because natural gas fuels the power plants that are brought online primarily to satisfy peak demand.

**Heat Rates** are the common measure of power plant efficiency and are derived from power and natural gas prices:  $Heat Rate = Power Price \div Natural Gas Price$ . Heat rates are typically higher when gas prices are lower. Heat rates are impacted by weather, regulatory changes, consumer demand and power plant retirements.
